

JACKOBOARD® Aqua Connect

New

*Slope screed made easy –
with integrated drain*

- Installation aid for creating the shower slope
- Integrated horizontal drain (DN 50)
- Ultra-low installation height: 70 mm
- Design grate made of solid brushed stainless steel included

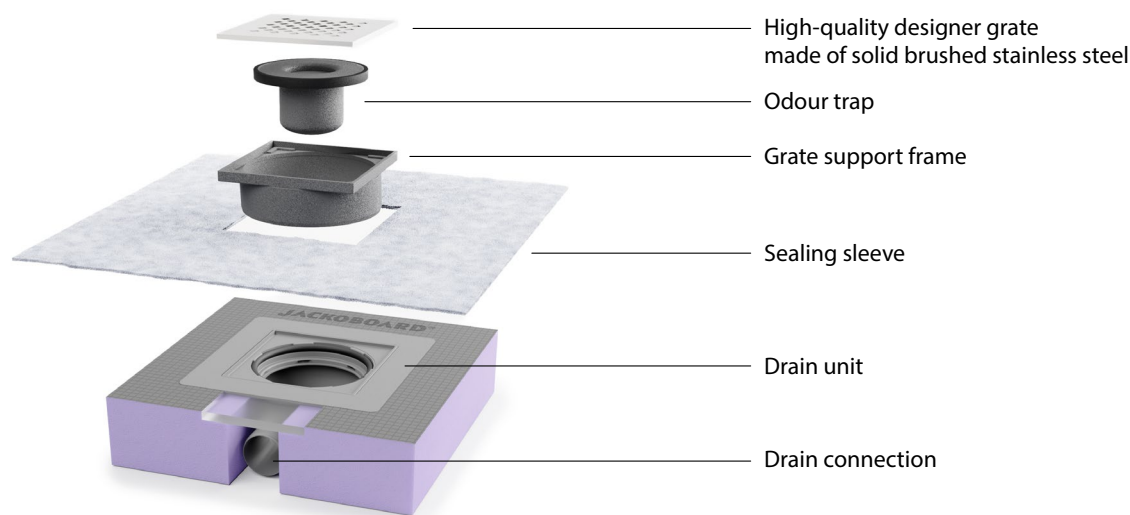

JACKOBOARD® Aqua Connect

The system solution for shower slope with integrated drain – simple, safe, time-saving

JACKOBOARD® Aqua Connect makes it easy to create a proper slope in the shower area. The integrated drainage technology with horizontal outlet (DN 50) speeds up installation and ensures reliable water drainage with a high flow rate of 1.0 liters per second. With a construction height of only 70 mm, the system is suitable for both new builds and renovations.

The solid brushed stainless steel grate provides a premium look, while the height-adjustable grate frame (8–31 mm) allows flexible adaptation to the floor structure. The included sealing collar ensures secure waterproofing in bonded systems.
