

JACKBOARD® Sabo

Assembly mounting board for cladding WC wall elements.

JACKOBOARD® Sabo is designed for universal application in cladding WC wall elements. It can be used to clad from wall to wall, as shown in this example, or for cladding a box shape.

1) First, cut JACKOBOARD® Sabo to the right size.

2) JACKOBOARD® Sabo is screwed onto the steel frame of the WC wall element. It is fastened with self-tapping screws (countersunk head with fine thread) and JACKOBOARD® insulation board discs with Ø 36 mm. We recommend the JACKOBOARD® Sabo accessories for this. The fasteners described above can also be used for metal studwork. To fasten to wood studwork use standard dry-wall screws with a coarse thread and the JACKOBOARD® insulation board discs with Ø 36 mm.

3) After cutting, the cover is bonded with a suitable assembly adhesive (e.g. JACKODUR® assembly adhesive, BOARD-FIX®).

4) All edges are filled with a suitable glass fibre tape (e.g. JACKOBOARD® glass fibre tape).

5) JACKOBOARD® Sabo must be covered with tiles to ensure the sufficiently even distribution of pressure when the WC is in use. The tiles can be laid directly on JACKOBOARD® Sabo. All types and sizes of tiles can be used in principle. The tiles should, however, measure at least 100 x 100 mm, and be at least 7 mm thick. Once the tile adhesive has hardened, the WC can be mounted on the tile surface.

Note: JACKOBOARD® Sabo is only designed for cladding purposes. The load of the WC must therefore always be transferred through the steel frame of the WC wall element. With WCs that have a reduced contact surface, such as Subway 2.0 from Villeroy & Boch or WCs of a similar design, pre-wall elements for WCs, which have additional struts running vertically underneath the contact surfaces of the WC, must be used.
